

Download Sony Manual Focus Peaking

Hello Anders, While finding a list of cameras with focus peaking is difficult (to me as well) I can only give you my best recommendations. I personally shoot Sony and know that they have been implementing focus peaking on many of the earlier mirrorless models. Is there any way except focus magnification to improve the precision of the manual focus using peaking? When I used a Nikon FM2 the center prismatic focus aid was very crisp and with no slop. But the color peaking in my a6000 requires me to move the focus back and forth to find the center of a range of focus distances. Sony comes fully equipped with two powerful tools for manual focusing. This is useful for photographers using old manual lenses, with an adapter, or those filming videos. Peaking highlights the outlined area of your image that is in focus in either Red, Yellow or White. For people with A6000 and legacy lenses, what works best, manual focus/focus peaking using the LCD display or the EVF? I am asking since I have an A5100 and manual focus is not easy even with focus peaking (because it often seems right but then using manual zoom you can see it is out of focus).
